Abstract

1 Your abstract.

2 1 Introduction

3 Your introduction goes here! Simply start writing your document and use the Recompile button to
4 view the updated PDF preview. Examples of commonly used commands and features are listed below,
5 to help you get started.

6 Once you're familiar with the editor, you can find various project settings in the Overleaf menu,
7 accessed via the button in the very top left of the editor. To view tutorials, user guides, and further
8 documentation, please visit our help library, or head to our plans page to choose your plan.

9 2 Some examples to get started

10 2.1 How to create Sections and Subsections

11 Simply use the section and subsection commands, as in this example document! With Overleaf, all
12 the formatting and numbering is handled automatically according to the template you've chosen. If
13 you're using the Visual Editor, you can also create new section and subsections via the buttons in the
14 editor toolbar.

15 2.2 How to include Figures

16 First you have to upload the image file from your computer using the upload link in the file-tree menu.
17 Then use the includegraphics command to include it in your document. Use the figure environment
18 and the caption command to add a number and a caption to your figure. See the code for Figure ?? in
19 this section for an example.

20 Note that your figure will automatically be placed in the most appropriate place for it, given the
21 surrounding text and taking into account other figures or tables that may be close by. You can find out
22 more about adding images to your documents in this help article on including images on Overleaf.

23 2.3 How to add Tables

24 Use the table and tabular environments for basic tables — see Table ??, for example. For more
25 information, please see this help article on tables.

26 2.4 How to add Comments and Track Changes

27 Comments can be added to your project by highlighting some text and clicking “Add comment” in
28 the top right of the editor pane. To view existing comments, click on the Review menu in the toolbar

Figure 1: This frog was uploaded via the file-tree menu.

Item	Quantity
Widgets	42
Gadgets	13

Table 1: An example table.

29 above. To reply to a comment, click on the Reply button in the lower right corner of the comment.
 30 You can close the Review pane by clicking its name on the toolbar when you're done reviewing for
 31 the time being.

32 Track changes are available on all our premium plans, and can be toggled on or off using the option
 33 at the top of the Review pane. Track changes allow you to keep track of every change made to the
 34 document, along with the person making the change.

35 2.5 How to add Lists

36 You can make lists with automatic numbering ...

- 37 1. Like this,
- 38 2. and like this.

39 ... or bullet points ...

- 40 • Like this,
- 41 • and like this.

42 2.6 How to write Mathematics

43 L^AT_EX is great at typesetting mathematics. Let X_1, X_2, \dots, X_n be a sequence of independent and
 44 identically distributed random variables with $E[X_i] = \mu$ and $\text{Var}[X_i] = \sigma^2 < \infty$, and let

$$S_n = \frac{X_1 + X_2 + \dots + X_n}{n} = \frac{1}{n} \sum_i^n X_i$$

45 denote their mean. Then as n approaches infinity, the random variables $\sqrt{n}(S_n - \mu)$ converge in
 46 distribution to a normal $\mathcal{N}(0, \sigma^2)$.

47 2.7 How to change the margins and paper size

48 Usually the template you're using will have the page margins and paper size set correctly for that
 49 use-case. For example, if you're using a journal article template provided by the journal publisher,
 50 that template will be formatted according to their requirements. In these cases, it's best not to alter
 51 the margins directly.

52 If however you're using a more general template, such as this one, and would like to alter the margins,
 53 a common way to do so is via the geometry package. You can find the geometry package loaded in
 54 the preamble at the top of this example file, and if you'd like to learn more about how to adjust the
 55 settings, please visit this help article on page size and margins.

56 **2.8 How to change the document language and spell check settings**

57 Overleaf supports many different languages, including multiple different languages within one
58 document.

59 To configure the document language, simply edit the option provided to the babel package in the
60 preamble at the top of this example project. To learn more about the different options, please visit
61 this help article on international language support.

62 To change the spell check language, simply open the Overleaf menu at the top left of the editor
63 window, scroll down to the spell check setting, and adjust accordingly.

64 **2.9 How to add Citations and a References List**

65 You can simply upload a .bib file containing your BibTeX entries, created with a tool such as JabRef.
66 You can then cite entries from it, like this: ?. Just remember to specify a bibliography style, as well
67 as the filename of the .bib. You can find a video tutorial here to learn more about BibTeX.

68 If you have an upgraded account, you can also import your Mendeley or Zotero library directly as a
69 .bib file, via the upload menu in the file-tree.

70 **2.10 Good luck!**

71 We hope you find Overleaf useful, and do take a look at our help library for more tutorials and user
72 guides! Please also let us know if you have any feedback using the Contact Us link at the bottom of
73 the Overleaf menu — or use the contact form at <https://www.overleaf.com/contact>.
